

# BITUMEN ROOFING SHINGLES WALL INSTALLATION NAILING PATTERNS

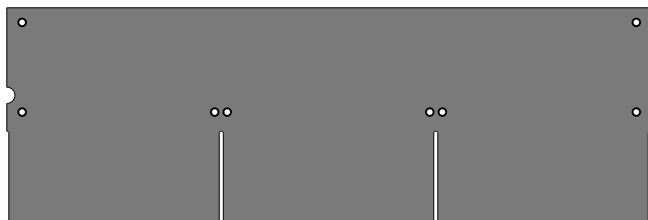

Katepal roofing shingles are also suitable for wall installations. When installing shingles on wall structures installation follows the same manner as when installing shingles on roofs, except the fastening should be done by adding four extra roofing nails, see the nailing pattern below.

Make sure that roofing nails are long enough for the combined thickness of the roofing shingles and wooden understructure, nail's sharp end should penetrate the understructure. When using Katepal roofing shingles on wall installation the use of bitumen underlay is not mandatory.
